Energized Text Books facilitate the students in understanding the concepts clearly, accurately and effectively. Content in the QR Codes can be read with the help of any smart phone or can as well be presented on the Screen with LCD projector/K-Yan projector. The content in the QR Codes is mostly in the form of videos, animations and slides, and is an additional information to what is already there in the text books.

This additional content will help the students understand the concepts clearly and will also help the teachers in making their interaction with the students more meaningful.

We expect the students and the teachers to use the content available in the QR Codes optimally and make their class room interaction more enjoyable and educative

Let us know how to use QR codes
In this textbook, you will see many printed QR (Quick Response) codes, such as
Use your mobile phone or tablet or computer to see interesting lessons, videos, documents, etc. linked to the QR code.

## FOREWORD

Classes I and II are very important in school education. We consider them the foundation. The learning by children at higher classes depends on skills of Language and Mathematics they acquire at the primary stage. Children have some mathematical concepts before they come to school. The learning of mathematics must be built on the foundation of the concepts known to them.

Children use mathematics at every life situation. They estimate, calculate and compare quantities in an informal way and in meaningful situations. With a view to bidding farwell to rote learning and beginning to learn mathematics, textbooks for classes I and II were prepared.

Units have been prepared in such a manner that pupils construct knowledge through investigation, observation and achieve mathematical concepts in accordance with the basic principles laid down in National Curriculum Framework 2005 and Right to Education 2009. Meaningful 'Activities' and 'Exercises' were included such that children understand mathematical concepts and utilise their knowledge. Mathematical concepts were introduced in each unit of this book beginning with events in pupil's life, games they play and so on. Activities and exercises ensure that pupils acquire skills like understanding concepts, solving problems in a systematic way, thinking logically, expressing ideas in mathematical language etc. The book contains a large number of pictures besides different situations and activities to ensure proper understanding of concepts.

With an intention to help the students to improve their understanding skills in both the languages i.e. English and Urdu, the Government of Telangana has redesigned this book as bilingual textbook in two parts. Part-1 comprises 1 to 10 lessons and Part-2 comprises 11 to 19 lessons.

Learning mathematics is every child's right. Children can achieve mastery over numbers and the four mathematical operations by utilising these textbooks which have been prepared to create interest for mathematics and to ensure learning with enthusiasm. The requisite teaching-learning material should be prepared and ensure proper utilisation of children's learning time by organising teaching-learning processes. This is the first step towards preparing the textbooks in the new system. We wish all the teachers will implement this and ensure that pupils achieve the mathematical skills specified for classes I and II.

## NOTE TO TEACHERS

- Mathematics textbooks for classes I and II were prepared according to the basic principles suggested in NCF-2005 and the guidelines given under RTE-2009.
- Units were prepared in such a manner that pupils can learn mathematics with enthusiasm.
- Every unit includes the mathematical concepts known to pupils and new concepts for the unit concerned besides appropriate exercises.
- The exercises have been prepared to ensure introduction of concepts through day - to - day / meaningful situations, to get pupils to solve problems that involve logical thinking, to express ideas in mathematical language and so on.
- Exercises and activities are so planned that by the end of class I. pupils will be able to understand the concepts of number, acquire the ability to add and subtract numbers and by the end of class II, they will be able to add numbers with regrouping subtract numbers using the technique of borrowing, acquire the basic concepts of multiplication and division and so on.
- At the beginning of any unit, the pupils must helped to observe the pictures given. Questions must be asked to test their previous knowledge of mathematical concepts concerned. The concepts of the unit must be introduced accordingly. In this process, locally - available objects like pebbles, seeds, sticks, beads etc., must be made use of it must be orgnised as a classroom activity.
- Then group activities must be orgnised to solve problems in a systematic manner, to think logically, to estimate things and other exercises. This book includes certain instructions / suggestions for the teacher. Those instructions must be followed to take up questioning the pupils, discussing things with them, getting them to observe pictures, calculate and recording information etc.
- In the same way encourage pupils to understand the instructions given for problems before they can solve the problems by themselves.
- The textbooks have been prepared to help the pupils to take up exploration, observation, research, confirmation etc., to understand mathematical concepts and apply the knowledge for solving problems.
- Towards this end a number of pictures depicting pupil's real life situations have been included.
- Children use mathematics extensively in many day - to - day situations consequently they acquire skills of application. As these textbooks have prepared with this background, they are to be utilised completely and ensure utilisation of children's learning time.

## Syllabus - Expected Outcomes

## Unit - 1: Revision - 1

- Numbers from 1 to 20
- Counting different things like animals, birds, trees and writing their number
- Saying the sequence of numbers of things and people and writing them
- Saying the number before, after and between the given numbrs upto 20
- Arranging numbers upto 20 in ascending and descending orders and matching them

## Unit - 2: Revision-2

- Counting the things intens and ones. Saying how many tens and ones there are in them
- Writing numbers upto 100 in the expanded form.
- Writing numbers upto 100 in ascending and descending order and matching with things
- Identifying the small and big numbers among the given number writing them.
- Solving certain problems orally
- Identifying numbers small and big relationship among
- Solving puzzles based on certain conditions (More, Less)

## Unit - 3 and 4: Comparing three-digit numbers

- Counting and saying the numbers as hundreds, tens and ones upto 1000 and writing them below
- Saying the place value and face value of digits in a number and writing
- Writing the 3-digit number in the expand form and writing the number when its expanded form is given
Saying how many Rs.100's, Rs.10's and Re.1's there are for a given three- digit number
- Writing numbers below 1000 in the correct sequence and also in ascending and descending orders

- Writing the numbers before, after and between given numbers below 1000
- Writing the given number (1000) in words and writing the number when it if given in words.
- Forming numbers using the three digits given and saying between
- Using >, <, = symbols to show smaller than about two numbers.

## Unit - 5 and 6: Addition of numbers

- Adding two digit numbers-both in expanded and short forms
- Adding numbers less than 50 orally
- Adding two numbers using the 'carry over' method.

## Unit - 7 and 8: Subtraction of numbers

- Subtraction of two digit number-both in expanded and short forms.
- Subtracting numbers upto 50 orally
- Subtracting two numbers using the 'borrowing' method.

## Unit - 9, 10 and 11: Multiplication

- Understanding that multiplication is nothing but successive addition of the same number
- Saying the product of numbers related to numbers in columns and rows
- Writing multiplication tables ( 1 to 9 ) by using the method of successive addition
- Writing the product of multiplying a two-digit number by a single-digit number.

## Unit - 12: Division

- Identifying division and the symbol ' $\div$ ' concerned.

Distributing a certain number of things among a certain number of people equally.

## Unit - 13: Length

- Measuring lengths using nonstandard measuring tools
- Valuing the standard tools of measurment.

## Unit -15: Volume

- Identifying the more and less size among those given.

## Unit - 16: Time

- Describing when things are done in a day (morning, afternoon etc)
- Saying the names of days / months in a order

## Unit - 17: Money

- Identifying currency notes / coins
- Giving change for notes less than Rs. 100

## Unit - 18: Shapes

- Identifying different geometrical shapes without mentioning names like circle, square, rectangle, triangle etc. Compares and matches their shapes with things in daily life.

## Unit - 19: Let Us Record

- Counting things and recording the number in a table

"India is my country. All Indians are my brothers and sisters.
Ilove my country, and I am proud of its rich and varied heritage.
I shall always strive to be worthy of it.
I shall give my parents, teachers and all elders respect, and treat everyone with courtesy. I shall be kind to animals

To my country and my people, I pledge my devotion.
In their well-being and prosperity alone lies my happiness."

## (1) Numbers from 1 to 20

1. Look at the following picture, count the different things in it and write their number.

2. How many huts are there? $\square$
3. How many children are there?

4. How many cows are there in the picture? $\square$
5. How many mangoes can you see on the tree? $\square$
6. How many parrots are there on the mango tree? $\square$
7. Which are more in number, parrots or mangoes? $\square$
Get your pupils to observe the above picture. Get them to count each category of things. Let them write the correct numbers in the boxes.

Example:
Who is the second student? $\qquad$ John $\qquad$
1 . Who is the third student? $\qquad$
2. Who is the fifth student? $\qquad$
3. What is the ordinal number of Basha? $\qquad$
4. What is the ordinal number of Uma? $\qquad$
3. Look at the picture given below. Write the ordinal number of the student shown.

Example: What is the ordinal number of Seetha? $\square$
What is the ordinal number of Latha? $\square$
What is the ordinal number of Hari? $\square$
What is the ordinal number of Uma?
What is the ordinal number of Giri ?
What is the ordinal number of Rama?

12. Observe the of numbers written in ascending and descending orders.

Radha dictated to Ravi some numbers. They are 20, 60, 50 and 70. She asked him to write the numbers from the smallest to the biggest.

Ravi thought in the following way.

| The smallest among 20, 60, 50, 70 | 20 |
| :--- | ---: |
| The smallest among 60, 50, 70 | 50 |
| The smaller of 60 and 70 | 60 |
| The remaining number | 70 |

Then Ravi wrote the numbers as $20,50,60,70$.
Thus, writing numbers from the smallest to the biggest is known as writing in ASCENDING ORDER.

Then Radha asked Ravi to write the same set of numbers from the biggest to the smallest.

Ravi wrote like this.

| The biggest among 20, 60, 50, 70 | 70 |
| :--- | :---: |
| The biggest among 20, 60, 50 | 60 |
| The bigger of 20 and 50 | 50 |
| The remaining number | 20 |

So if you write 20, 60, 50 and 70 from the biggest to the smallest, you get 70, 60, 50, 20
Thus, writing numbers from the biggest to the smallest is known as writing in DESCENDING ORDER.

Get your pupils to understand the two orders of writing any given numbers.

## (3) Numbers with Three Digits

1. Look at the bundles of sticks and the loose sticks.

How much is $99+1$ ?

$$
\text { If you add } 1 \text { to 99, you get } 100 .
$$

The number that comes after 99 is 100 .
How many tens are there in 100 ? How many ones are there in 100 ?

$$
100=10 \text { tens } . \quad 100=100 \text { ones } .
$$

The last number with two digits is 99. It means the biggest number with two digits is 99 . There are 3 digits in 100 . The first number with three digits is 100 . It means 100 is the smallest number with three digits.
If you add 1 to the biggest number of two digits, you get the smallest number with three digits.
Get your pupils to count in bundles of sticks and the single stick. Introduce the number 100 to them.

## 

2. Count in hundreds and write the correct number.

Get your pupils to count in hundreds. Help them to understand writing of numbers 100, 200, $\qquad$ 900.

3. Look at the bundles of sticks and the loose sticks. Read the numbers.

| 1 hundred |  | 1 ones | $100+0+1=101$ |

| 1 hundred | 6 tens | 1000000 <br> 9 ones | $100+60+9=169$ |

Get your pupils to count in bundles of sticks and the loose sticks in hundreds,
 tens, ones and help them to understand how to read the numbers from 101 to 169.

Example-1: Observe the place, place value and face value of the digits in 746.

| Number | 7 | 4 | 6 |
| :--- | :---: | :---: | :---: |
| Position | hundreds | $\boxed{\text { tens }}$ | $\boxed{0}$ |
| Place Value | $7 \times 100=700$ | $4 \times \boxed{10}=40$ | $6 \times 1=6$ |
| Face Value | $\boxed{7}$ | $\boxed{4}$ | $\boxed{6}$ |

Example-2: Observe the place, place value and face value of the digits in 805.

| Number | 8 | 0 | 5 |
| :--- | :---: | :---: | :---: |
| Position | hundreds | tens | $\boxed{0}$ |
| Place Value | $8 \times 100=800$ | $0 \times 10=0$ | $5 \times 1=5$ |
| Face Value | $\boxed{8}$ | $\boxed{0}$ | $\boxed{5}$ |

Now write the place, place value and face value of the digits in $\mathbf{5 0 4}$.

| Number | 5 | 0 | 4 |
| :--- | :---: | :---: | :---: |
| Position | hundreds | $\boxed{\text { tens }}$ | $\boxed{0}=$ ones |
| Place Value | $\times \square=\square$ | $\times \square=\square$ | $\times \square=\square$ |
| Face Value | $\square$ | $\square$ | $\square$ |

Look at the following table. Write the place and place value of the digit.

| Number | What is the place of 0? | What is the place value? |

Thousand is a four-digit number.
The last number among three - digit numbers is 999.
The biggest number among three - digit numbers is 999 .
The first number among four - digit numbers is 1000 .
The smallest number among four - digit numbers is 1000 .

Help your pupils to understand the instructions and let them solve the above problems by themselves.

## 12. Play the game:

## CLAP-SNAP-TAP

To snap means to make a sharp noise using your fingers.

SNAP = one (1)

To clap means to hit your open hands to make a sound.

$$
\text { CLAP }=\operatorname{ten}(10)
$$

To tap means to hit something to make a sound.

TAP = hundred

The teacher must make the above sounds - Snap, Clap and Tap. The pupils must say the numbers based on the sound made by the teacher.

Example:-

| TAPS | CLAPS | SNAPS | Place Value |  |  | Number |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 2 | 5 | 8 | 200 | 50 | 8 | 258 |
|  |  |  |  |  |  |  |

In this manner the pupils must say the place value and the numbers as per the sounds made - Snap, Clap, Tap. If any pupil makes a mistake, he is out of the game. The game continues. The one who lasts till the end is declared the winner.

Get your pupils to play this game. Help them to understand the digits and their place values.

## 13. Play a game with sticks.

1 long stick = 100
1 medium stick = 10
1 short stick = 1

Two pupils must play this game. Take 9 sticks of long, medium and short sticks (9 sticks each). Have them on your palm, shake them and drop them on the floor. Pick each stick without moving the other sticks. Count the value of sticks that was picked as per the values assigned the sticks given above. Say the total value. If, while picking sticks, other sticks are moved, the second player gets the chance. In this manner the two pupils play alternately. The one who gets a bigger number scores a point.

Example: The sticks picked up

| Big sticks | Medium sticks | Short sticks | The number <br> formed |
| :---: | :---: | :---: | :---: |
| 4 | 6 | 5 | $400+60+5=465$ |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |

Play like this one after another. At the end one who gets more points wins the game.

## (4) Comparing Three-Digit Numbers

1. Look at the notes and coins. Say which are of more value and which are of less value.

One day Rangamma and Sitamma sold vegetables at the weekly market. They got the following notes and coins shown under their names. Who earned more?

Rangamma earned : $\square$

Sitamma earned : $\square$

Get your pupils to compare three-digit numbers using notes and coins. Help them to understand the process of comparison.

$\qquad$ $2022-23-$ -

In 452 , there are 4 hundreds In 381 , there are 3 hundreds.

Rs. 300 is less than Rs. 400, It means Rangamma earned more.
Rs. 381 is less than Rs. 452 , that is

$$
381<452
$$

or

Rs. 452 is more than Rs.381, that is

```
452>381
```

On another day, Rangamma and Sitamma sold vegetables and they got the following notes and coins. How much was earned by each of them?

Rangamma earned :

Sitamma earnd : $\square$

Get your pupils to compare three-digit numbers using notes and coins. Help them to understand the process of comparison.

& \text { گيتّ كآمن } \\
& 216=216-{ }^{2} \\
& \text { 共 }
\end{aligned}
$$

2. Look at the notes and coins shown below. Say which are more and which are less.

In 354 and 321 there are equal number of hundreds.
Now let us observe the tens.
In 354 there are 5 tens.
In 321 there are 2 tens.
There are more tens in 354 than 321.
Therefore 354 is bigger.
We say 354 is bigger than 321
We write $354>321$
In the same manner 321 is less than 354

We write it as $321<354$

$$
216=216

3. Look at the notes and coins shown below. Say which are more and which are less.

In both 231 and 235, the hundreds and tens are equal.
Now observe the ones.
In 231 there are 1 ones.
In 235 there are 5 ones.
Therfore 235 is bigger.
It means 235 is bigger than 231.

```
235>231

## 8 Subtraction of Numbers (Using Regrouping)

1. Observe the note and coins. Say how much is 45-27.

Lata went to a shop with Rs. 45. She bought things for Rs. 27. She gave the shopkeeper Rs. 45 she had. He gave her Rs. 8. She doubted whether he gave her the correct amount. She calculated as below. You observe her calculation.

## 9) Multiplication of Numbers - 1

1. Look at the following picture. Observe the rows of trees. Say how many rows are there?

Teacher: Ravi, how many trees are there in each row? What is their total number?
Ravi : There are 6 trees in each row. Their total is $6+6=12$
It means there are 6 trees in each of the two rows.
We can write it as $2 \times 6=12$.
It means adding 6 two times.
$6+6=12$
$2 \times 6=12$

Teacher. Rahim, how many columns of trees are there?
Rahim : Six columns.
Teacher. Rahim, how many trees are there in each column? What is their total number?
Rahim : There are two trees in each column. Their total is $2+2+2+2+2+2=12$. It means there are two trees in six columns.

We write it as $6 \times 2=12$.
It means adding 2 six times.

```
2+2+2+2+2+2=12
6 < 2=12
```

Adding a number again and again is called repeated addition.
2 冈6 = 12;
6 区2 $=12$

Here we have used a symbol $\times$. It is called the symbol for multiplication.
:Multiplication is repeated addition. Ex: $3+3+3+3=4 \times 3=12$ :
Get your pupils to identify the concept of multiplicaton using the rows of trees and the number of trees in each row shown in the above picture. Introduce the symbol of multiplication to your pupils.

2. Look at the pictures of fans. Count the wings. Say how many are there?

Multplication of numbers:

One fan has 3 wings $=1 \times 3$

Three fans have $3+3+3=9$ wings $=3 \times 3$

Four fans have $3+3+3+3=12$ wings $=4 \times 3$

Five fans have $3+3+3+3+3=15$ wings $=$ $\qquad$

## (10) Multiplication Tables <br> (1 to 10) <br> Count the beads on the chain. <br> Say how many are there. <br> 

Each chain has 10 beads, doesn't it?

Can you say how many beads are there in 2 chains?
$10+10=2 \times 10=20$
2 tens means 20 beads

In the same manner, can you say how many beads will be there in $3,4,5$, $6,7,8,9$, and 10 chains?

| Number <br> of chains | Sarala counted the beads in the chains and wrote the numbers as shown below. |  |  |
| :---: | :--- | ---: | :---: |
| 1 | 10 | 1 ten | $1 \times 10=10$ |
| 2 | $10+10$ | 2 tens | $2 \times 10=20$ |
| 3 | $10+10+10$ | 3 tens | $3 \times 10=30$ |
| 4 | $10+10+10+10$ | 4 tens | $4 \times 10=40$ |
| 5 | $10+10+10+10+10$ | 5 tens | $5 \times 10=50$ |
| 6 | $10+10+10+10+10+10$ | 6 tens | $6 \times 10=60$ |
| 7 | $10+10+10+10+10+10+10$ | 7 tens | $7 \times 10=70$ |
| 8 | $10+10+10+10+10+10+10+10$ | 8 tens | $8 \times 10=80$ |
| 9 | $10+10+10+10+10+10+10+10+10$ | 9 tens | $9 \times 10=90$ |

Get your pupils to count groups of things and help them to understand how to write multiplication tables.

1. Look at the repeated addition of 5 . Write the Multiplication Table of 5.

2. Look at how the Multiplication Table of 2 is written. In the same way shade the boxes and write the Multiplication Table of 3 .

Get your pupil to understand the instruction for each table. Let them write all the tables from 1 to 11 by themselves.

3. Write the Multiplication Table of 4.

## LEARNING OUTCOMES

## The learner....

## Extends patterns using different objects, shapes and numbers

Solves simple daily life/situation problems/ based on addition and subtraction of two digit numbers with and without regrouping

MAITHEMATICS

## CLASS 2

Reads and writes numbers up to 99 using groups of tens and ones

Estimates and verifies by measuring length/ distances, weight and capacities using non-standard units

Describes basic 3D and 2D shapes with their observable characteristics.

Collects data, represents it in a table and draws inferences
